

THE JUBILEE AS A TYPE IN THE LAW

The length of the white linen curtain around the court is 280 cubits or using the 25 inch cubit, 7000 inches, not including the gate. The white linen curtains that made up the Tabernacle is made up of 10 curtains each 4 cubits by 28 cubits in length. Twenty eight cubits by 10 curtains equals 280 cubits or 7000 inches using the 25 inch cubit. There are a total of 56 wood post around the court, each 5 cubits high. 56 x 5 = 280 cubits of post or using the 25 inch cubit = 7000 inches. We also noted that the curtains that made up the Tabernacle were 4 cubits wide. There were ten of these curtains. 4 x 10 = 40 x 25 inches = 1000. In the year 626BC, Israel celebrated their last Jubilee before going into captivity. At that point in time the type ceased and the anti-type began to silently count, 50 x 50 or 2500 years ending at the beginning of earth's great Jubilee, not a year, but the anti-type, a thousand years.
